Technical Product Leader

Technical product leader with 10+ years building and scaling platforms across mobility, logistics, and B2B tech. A hybrid of PM and hands-on builder — regularly bootstraps MVPs, writes scripts, and creates prototypes independently using Cursor and Claude Code to accelerate proof-of-concept without pulling engineering off core work. Grounded in a software engineering foundation, with a track record of turning operational chaos into structured systems. Currently building the data and operations platform underpinning Hertz's autonomous vehicle fleet partnerships.

EXPERIENCE

Hertz – Remote

Staff Product Manager, Mobility & Autonomous Fleet | 2025–Present

Leads product and data platform development for Hertz's Mobility division, spanning managed fleet operations for rideshare drivers across multiple sites in four geographies as we set the foundation for autonomous vehicle partnerships.

- Architecting a fleet operations platform – including vehicle state management, maintenance workflows, and field ops tooling – as the operational foundation for AV fleet management at scale.
- Establishing fleet KPI infrastructure, migrating operational tracking from spreadsheets and ad-hoc messaging into structured databases and reporting systems.
- Digitizing core fleet workflows, including out-of-service management, vehicle/driver attribution, preventive maintenance, and vehicle turnover processing.
- Designing and prototyping driver performance dashboards, surfacing behavioral and safety metrics for operational decision-making.

Revel – Brooklyn, NY

Director of Product Management (*promoted from Group PM and Senior Technical PM*) | 2022–2025

Led product and operations strategy across Revel's rideshare platform, scaling from 50 → 500 vehicles and 200 → 1,200 drivers, overseeing the tech org spanning engineering, design, and data. Functions as a key strategic partner to org-wide leadership, responsible for roadmap planning, operational scaling, and cross-functional initiatives that drive margin and growth.

- Owned company-wide roadmap planning – aligning senior leadership, tech, and operations on delivery capacity and strategic priorities.
- Directed company-wide transition from hourly to fare-based pay for 1,000+ drivers – driving a \$4 EBITDA improvement per driver hour.
 - Founded and scaled Revel Leasing to \$1.5M/month in recurring revenue, reducing core business costs by \$0.92 per driver hour.
 - Bootstrapped the first iteration of the driver onboarding funnel before overhauling the driver onboarding funnel – doubling new activations, increasing qualified driver supply by 2.5x, and eliminating most manual operations intervention.
 - Developed a linear regression-based fare algorithm to replace hourly pay, balancing driver acceptance rates and earnings per hour.
 - Integrated real-time driver payments on ride/tip completion, replacing weekly pay cycles.
 - Built identity verification and license validation pipelines (leveraging AWS OCR) to ensure contractor eligibility.
- Built a proprietary driver-passenger batch matching system, reducing average wait times by ~60 seconds, and introduced synthetic ETA logic to optimize for toll routing, driver utilization, and non-passenger pickup time.
- Drove a long-term shift away from third-party SaaS by developing custom internal tooling, saving \$2.5M annually while increasing system scalability.

Amazon – New York, NY

Product Manager, Global Delivery Strategy & Fulfillment | 2021–2022

Led strategic product initiatives to optimize grocery delivery labor planning across 60+ sites in North America and Europe. Partnered with operations, data science, and engineering teams to reduce costs and improve delivery efficiency.

- Designed and launched an automated labor planner that saved \$4M+ annually through better driver utilization and supply-demand alignment.
- Defined requirements to expand Amazon's routing and scheduling systems to support a new labor model.
- Developed and presented monthly business reviews to senior stakeholders across global markets, aligning teams on KPIs and strategic decisions

StoryCorps – Brooklyn, NY

Associate Director of Product Management (*promoted from PM*) | 2019–2021

Owned digital product development across StoryCorps' user platforms and internal systems. Worked cross-functionally with executive leadership, engineering, marketing, fundraising, and archival teams to drive technical improvements.

- Executed a successful multi-faceted product launch, migrating 75,000 professional interviews, upgrading CRM systems, and automating workflows to provide access to over 125,000 participants.
- Communicated cross-functionally with the Executive, Marketing, Recording, and Production teams to identify and implement incremental digital improvements.
- Optimized internal operations by building custom internal tools using platforms like Zapier, Python, AWS Lambda, Salesforce Process Builder, Mailchimp, and WordPress to streamline workflows and reduce labor-intensive tasks across the marketing and archiving teams.
- Launched virtual interviewing platforms for internal and external usage in response to COVID-19, resulting in the completion of over 10,000 interviews.

Canopy Innovations – New York, NY

Product Manager | 2018–2019

- Oversaw the roadmap for modernization and improvements to a medical language learning product.

Prescriptive Data – New York, NY

Associate Product Manager | 2016–2017

- Led the design, documentation, and testing of features, functionalities, and releases of NANTUM: a SaaS building automation platform focused on minimizing electricity and CO2 footprint.
- Crafted a product roadmap based on technological gaps for internal tools designed to monitor, optimize onboarding, and provide real-time support to users and buildings.
- Oversaw and documented the prioritization and resolution of front-end, API, and data acquisition issues.
- Coordinated QA and release management with various internal and external stakeholders.

J.P. Morgan Chase & Co – New York, NY

Software Engineer, Asset Management | 2014–2016

- Built various software tools in an agile environment using C#, JavaScript, and SQL to extract, format, display, and edit data sources for workflow optimization and task automation across operations.
- Product-managed and beta-tested new platform functionalities for broader team usage.
- Developed and tested a Java REST application designed to interface with a third-party OCR software.

EDUCATION

New York University, Stern School of Business – New York, NY

Master of Business Administration, 2020

Specializations in Product Management, Strategy, Management of Technology & Operations

Temple University – Philadelphia, PA

Bachelor of Science, Information Science & Technology, 2014
